

Johnston Memorial Hospital Receives Approval For Certificate of Need

ADAMS® 4/19/2010

ADAMS is pleased to announce that Johnston Memorial Hospital, located in Abingdon, Virginia, recently received approval for Certificate of Need.

Johnston Memorial Hospital is home to more than 700 employees and 120 medical staff members. The hospital celebrated its 100th anniversary in 2005. In order to address capacity issues and rising operational costs related to an aging facility, Johnston Memorial Hospital initiated planning and design for a replacement facility to be constructed on a site owned by the hospital.

The new facility is targeting 230,000sf and will be attached to the existing Cancer Center. The hospital is designed for 116 beds and will include surgery, emergency department, obstetrics and gynecology, imaging and same day surgery. Development and construction of a professional office building is also in consideration. The total program budget is approximately \$125 million.

In need of preliminary consulting and management services for the replacement facility program, Johnston Memorial Hospital engaged ADAMS in May 2008 to serve as Program Manager through completion of construction documentation and the establishment of a guaranteed maximum price.
